

Microsoft 365 Integration

Detect Microsoft 365 threats faster, simplify your security operations and reduce cyber risk.

Make your cyber security easier to manage by integrating your Microsoft 365 account with Defense.com.

This Defense.com integration gathers telemetry from Microsoft 365 using the Microsoft Graph API. This includes your organisation's Microsoft Secure Score, and various security alerts from Microsoft Entra ID.

Instead of switching between multiple dashboards in Microsoft 365, with this Defense.com integration you can simplify your security operations by combining all alerts from Microsoft 365, and all other vendors in your environment, into one prioritised list.

Each threat contains step-by-step remediation guidance, so you know exactly what to focus on first and how to fix it.

Enhance your Microsoft 365 security

Detect threats faster

Get instant security alerts for your Microsoft 365 account and users to detect malicious activity.

Simplify security operations

Make threat management easier by combining telemetry from your whole security stack in one place.

Reduce cyber risk

Strengthen your security with clear remediation advice and actions to improve your Microsoft Secure Score.

Integration highlights

- Ingest logs and security alerts from Microsoft 365
- Monitor your account and users for suspicious activity
- Bi-directional syncing with Microsoft 365
- Manage all your threats in a single platform
- Track and improve your Microsoft Secure Score
- Detailed remediation advice to fix issues fast
- Integrate in minutes, no agent required
- Clear and easy-to-use interface
- No limits on users or log data volumes
